

Getting TestNav ready for Testing on iPads

Download TestNav from Self Service. If TestNav is not visible in Self Service, type the TestNav name into the search field. It should appear.

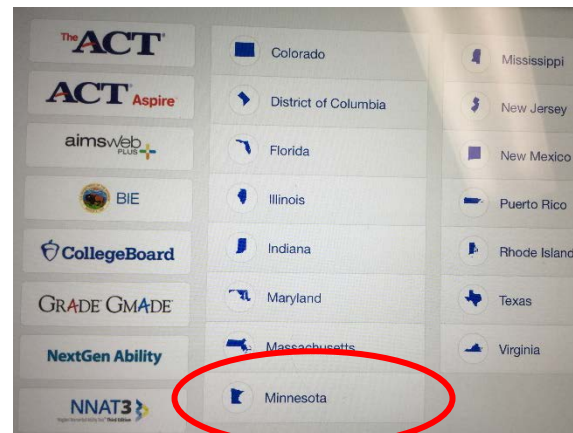

After downloading to the device, launch TestNav. When opened the first time, there will be a message indicating TestNav would like to access the Microphone.

Make sure students select OK.

If students click Don't Allow, they will get a message to Open Settings – see back page.

On the next screen, select Minnesota.

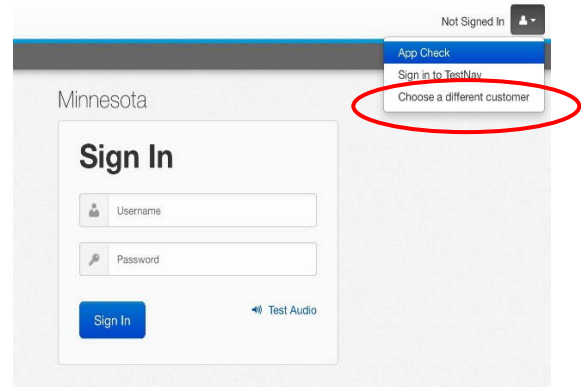

The next screen will be the log in page for the test. Make sure Minnesota is the test name above the Sign in fields.

TestNav can be closed. Every time it is opened it will now open to this login page.

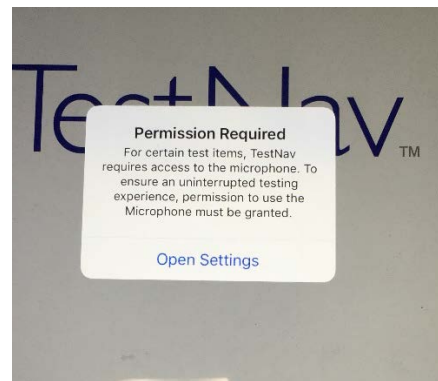

If Minnesota is not listed above the Sign In fields, go to the “person icon” in the upper right corner where there is a dropdown. Select **Choose a Different Customer** to return to the page to select Minnesota.

If students did not allow TestNav to access the Microphone:

Even though our Minnesota state tests do not involve use of a microphone, TestNav will not function without this permission.

Select **Open Settings**.

Scroll down to locate the TestNav program on the left. Then select the Microphone toggle button. Move the button to the right. The button will turn green when activated. You can then go back to TestNav and select the test for Minnesota.
